

Certificate of Participation for Arindam Sharma

This is to certify that Mr. Arindam Sharma participated in the following Formula Student Germany event as a team member for:

"VIT University - Vellore, Vellore, India" at

- Formula Student Combustion in August 2023 at the Hockenheimring

Formula Student is an international student competition in which students have the challenge to design and build a single seat formula race car with which they must then compete against other teams from all over the world at one of the Formula Student competitions, such as Formula Student Germany. The competition is not won solely by the team with the fastest car, but rather by the team with the best overall package of design, performance, and financial and sales planning.

Formula Student challenges the team members to go the extra step in their education, by incorporating into it intensive experience in building and manufacturing, as well as considering the economic aspects of the automotive industry. Teams take on the assumption that they are a manufacturer developing a prototype to be evaluated for production. The target audience is the non-professional weekend racer. The race car must show very good driving characteristics such as acceleration, braking and handling. It should be offered at a very reasonable cost and be reliable. Additionally, the car's market value increases through other factors such as aesthetics, comfort and the use of readily available, standard purchased components.

The challenge the teams face is to compose a complete package consisting of a well-constructed race car and a sales plan that best matches these given criteria. A jury of experts from the motorsport, automotive and supplier industries judge the cars on their sales plan based on design, cost planning and sales presentation. The rest of the judging takes place on the track, where the students demonstrate in a number of performance tests, how well their self-built race car's perform in real life.

In short, Formula Student Germany forms an excellent preparation for the challenges faced by an engineer in a day-to-day working life.
